## Query about calling a Click-to-Call

Hi,

I have created a Survo which takes 3 parameters. I have also created a Smart Click-to-Call to call this survo.

The code for this smart click to call provided is configured to open a dialog box in which the user will input his number. Now my website already takes this number (the phone\_to\_call parameter). I don't want this dialog box to pop-up, and I want my "Initiate Request" button to behave exactly as if the button on the new dialog box had been clicked. In other words, how do I directly call the click-to-call without the intermediate dialog box? The application is on ASP.net.

Thanks,  
Sneha Nirody
